### Volltext

All wild animals are subject to general species protection. This means that wild animals may not be caught, injured or killed deliberately or without good reason (Section 39 (1) No. 1 BNatSchG).

A large number of species are also specially protected. They can be found in Annex 1 of the Federal Species Protection Ordinance. Bumblebees and all other wild bees as well as hornets are subject to this special protection. The animals may not be caught or injured and their nests may not be damaged or destroyed (§ 44 para. 1 no. 1 and 3 BNatSchG).

Wasps, on the other hand, are subject to general species protection and may only be controlled if there is a reasonable reason to do so. As there are different wasp species, it is necessary to check which species is involved here.

The species that build free-hanging nests are neither aggressive nor snacking and generally do not seek contact with humans. As a rule, there is no reasonable reason to remove their nests. However, only two wasp species (German wasp *Vespula germanica* and common wasp *Vespula vulgaris*) build their nests in burrows, in natural cavities (e.g. woodpecker holes) or in dark cavities in buildings (including in nest and shutter boxes) and are interested in sweet drinks or food. Most insect species are harmless and do not
