which may significantly impair the performance and functionality of the ecosystem or the landscape.

The following are not considered interventions

- agricultural, forestry and fishing land use, provided that the objectives and principles of nature conservation and landscape management are taken into account,
- the resumption of agricultural, forestry and fishing land use that was temporarily restricted or interrupted due to contractual agreements with the nature conservation authority or due to participation in public programs to restrict management, provided that the resumption of use takes place within 10 years of the expiry of the contractual agreement or the program to restrict management.

Likewise, maintenance measures on bodies of water pursuant to Section 38 of the State Water Act (WasG SH) and nature conservation measures ordered or promoted by the nature conservation authorities for the creation, maintenance and development of areas and landscape elements are not interventions.

Erforderliche Unterlagen

- Plan,
- Description of the intervention,
- all information required to assess the project.

For large infrastructure projects in particular, a so-called "nature conservation report" is required. This should contain

- the project description,
- the determination of the likely impact on nature and the landscape and
- a description of the options for avoiding or minimizing the impact as well as compensatory and/or replacement measures.

It is recommended that the responsible authority be contacted at an early stage in this regard.
