Volltext	Protected biotopes are habitats of plant and animal species that are particularly worthy of protection. These habitats deserve special protection because they are rare, have a high ecological value and/or are threatened with destruction. Geotopes are often particularly striking formations of inanimate nature that provide insights into the history of the earth, including the origin and development of life on earth. There are laws and international agreements to protect these habitats. In Mecklenburg-Vorpommern, the following biotope types and geotopes are under special legal protection: Biotopes: • Near-natural moors and marshes, swamps, reed beds
