Teaser	As the developer, you are responsible for ensuring that the building site is free of explosive ordnance. If you apply for information on explosive ordnance contamination, it will be checked whether your property or your construction project is located within a contaminated area.
Volltext	<p>In good time before the start of construction, usually during the planning phase, builders must ensure that no explosive ordnance is suspected. This is achieved by issuing a clearance certificate or, if the suspicion of explosive ordnance is confirmed, by carrying out an on-site explosive ordnance survey.</p> <p>At this point, you have the option of obtaining free online information from the Mecklenburg-Vorpommern Munitions Recovery Service to check whether the presence of explosive ordnance on your property can be ruled out and confirmed by a clearance certificate or whether a further examination</p>

## Modul

## Sachverhalt

(including aerial photo evaluation) is recommended.

You will receive this information on the basis of data from the Mecklenburg-Vorpommern Explosive Ordnance Register.

If you are recommended to carry out a further examination, this means that the munitions salvage service has received information on possible explosive ordnance hazards (explosive ordnance contamination). This may be the case if your property is located in an area that was bombed during the war. This does not immediately pose a danger. The suspicion of explosive ordnance must only be dispelled or an explosive ordnance clearance certificate must be presented if you change the condition of your property. This includes, for example, the construction, alteration or change of use of buildings, construction projects not subject to a procedure and other measures involving soil penetration.

A clearance certificate is limited to the period of validity of your building permit. In the case of construction projects not subject to procedures and other ground-engaging measures, the clearance certificate is valid for three years from the date of issue.

If it is known that the area of land you have commissioned is contaminated with munitions, you should immediately commission a further inspection.

**\*\*Online information from the Munitions Recovery Service M-V:\*\***

If the result of the online information does not confirm the suspicion of explosive ordnance, you can download this online information with the clearance immediately afterwards.

If the result of the online information recommends a further examination in order to have the suspicion of explosive ordnance on the property checked, you can order this examination directly afterwards for a fee.

Hinweise	If work is carried out at depths of existing media carriers or within existing routes (e.g. roads, paths, squares) that were created after 1945 or were fundamentally expanded and renovated after 1945, the Munitions Mining Service assumes that no explosive ordnance will be encountered during the activities to be carried out here. In these cases, you do not need to obtain any information or action from the munitions salvage service.
