Teaser	If you intend to make significant changes to an installation that requires a permit, you must apply for a permit from the responsible authority.
Volltext	Do you operate an installation that requires a permit under immission control law, for which you already have a permit under immission control law, and are you planning to make significant changes to this installation? Significant changes exist if the change to the location, nature or operation could have adverse effects. If these are also significant for the approval requirements for installations requiring approval, approval is required. A permit is also always required if the modification or expansion of the operation of installations requiring a permit causes the performance limits or the size of the installation to be reached. For this reason, significant changes to installations requiring approval must be reviewed by the immission control authority. To do this, you must submit an application for a modification permit and submit all the necessary documents for the assessment. The application can be made in writing or electronically.

Modul	Sachverhalt
	However, approval is not required if • the adverse effects caused by the change are obviously minor and • the fulfillment of the requirements of the approval requirements of the Federal Immission Control Act for installations requiring approval is ensured. This also applies if an approved installation or parts of an approved installation are to be replaced within the scope of the approval granted. If the operator is of the opinion that the planned change is not significant, notification of the change to the competent authority is required.
