Teaser	If you want to operate an inspection body that carries out quality controls for raw milk, you need a license If you want to operate an inspection body that carries out quality controls for raw milk, you need a license.
Volltext	Before the raw milk produced by farms can be delivered and sold to dairies or milk traders, it must undergo a comprehensive quality control by a so-called inspection body. Any inspection body wishing to determine the quality of raw milk requires a license to do so. The delivered raw milk is tested for the following quality characteristics according to specified test procedures: • fat and protein content • Bacteriological quality (total bacterial count) • Presence of inhibitors, for example antibiotics • content of somatic cells • freezing point The quality test comprises the following steps: • Sampling • Transportation of the sample to the test site • Quality inspection • If necessary, the calculation of average values for each quality characteristic, which affect the calculation
