Handlungsgrundlage	Ordinance on the Prevention of Damage Caused by Explosive Ordnance (KampfmittelVO) [https://www.landesrecht-hamburg.de/bsha/document/jlr-kampfmVHA2005V1P1](https://www.landesrecht-hamburg.de/bsha/document/jlr-KampfmVHA2005V1P1)
Teaser	Before you intervene in the construction site, you must obtain information as to whether there is any suspicion of munitions in the affected construction area.
Volltext	There are still munitions from the Second World War in the ground and they pose a danger, especially when the ground is being worked. If you want to intervene in the building site, you are therefore obliged to avoid possible dangers for yourself and others. To do this, you must clarify with the responsible authority whether there is a specific suspicion of munitions in the area of your building project. You have the following options: 1. You apply for a hazard assessment. The responsible authority evaluates relevant aerial photographs from the Second World War and other historical sources and then sends you a statement on the suspected munitions. 2. You request an inspection of the suspected area register. This option is only suitable for planning purposes. The responsible authority does not carry out a new evaluation, but simply provides you with existing information. This data is usually not comprehensive or complete. For areas that are not marked, the question of munitions is considered unresolved. Before you can carry out work in these areas, you must apply for a

Modul	Sachverhalt
	hazard survey. The information provided by the responsible authority on the contamination of explosive ordnance is always based on the latest knowledge. If you already have an older hazard survey or aerial photo analysis, you can use the online service to check whether new findings lead to a changed classification.
Erforderliche Unterlagen	• Property map or site plan with marked application area • Proof of ownership of the property in question (extract from the property cadastre, land register or purchase contract) • If you are not the property owner: Power of Attorney
Voraussetzungen	• They intend to intervene in the building site.
Kosten	The costs vary according to the time required.
Verfahrensablauf	• You submit your application together with the necessary documents to the responsible authority. • The responsible authority will examine your application and send you the requested information.
Bearbeitungsdauer	• Examination of the suspected area register: up to several days • Hazard assessment / aerial image evaluation: approximately 4 weeks (the current duration can be found on the website of the responsible authority, see the "Links" section) • Use of the online service: immediately - In hardship or emergency cases, you can request faster processing.
Frist	No

Hinweise	You can also commission a systematic search for munitions (probing) in order to specifically examine the building site for possible dangers. This probing may only be carried out by suitable companies. You can find a list of suitable companies in Hamburg in the "Links" section.
Rechtsbehelf	• contradiction • lawsuit before the administrative court
Kurztext	• World War II munitions in the soil pose a danger, especially when the soil is being worked. • Anyone wishing to intervene in the building site must first clarify whether there is any suspicion of munitions in the area of the construction project. • Option 1: Request a hazard assessment • Existing aerial photographs from the Second World War and other historical sources are evaluated, followed by a statement on the suspicion of explosive ordnance • Option 2: Request an inspection of the suspected area register • is only suitable for planning purposes

Modul	Sachverhalt
	• The responsible body does not carry out a new evaluation, but merely provides existing information (often not comprehensive or complete) • For non-marked areas, the munitions issue is considered unresolved • Before work can begin, an additional hazard assessment must be requested • If someone already has an older hazard survey or aerial photo analysis, they can use the online service to check whether new findings lead to a changed classification.
